ABOUT MÜCHER

Mücher Dichtungen is part of the California based worldwide Mission Rubber group of companies; **the inventors of the rubber flexible coupling over 60 years ago.**

Since 1955 Mücher is developing, manufacturing and distributing couplings and seals for all pipe materials used in the low pressure civils and drainage industry. In general Mücher products are used when two pipes with both different diameters and materials need jointing. This requires a custom-made consulting to find a reliable long-term solution.

Whereas Mücher's core business used to be in the civils and drainage industry only, nowadays the business fields have been extended and include both plumbing and industry.

Due to working closely with various pipe manufactures, combined with the long-term presence on the European market place a product range has been formed that offers a reliable and permanent solution for almost any possible application. Especially the sealing technologies for repair solutions require a wide knowledge and expertise for all the different pipe materials and connection systems.

The heart of our manufacturing is the area of customized solutions where Mücher with its 60 year's experience is always identifying the right sealing system, is manufacturing the correct solution and is then supplying to site on time.

The majority of the product range is manufactured at the European headquarters in Frechen, near Cologne. Customized solutions for the UK market are also manufactured at Mücher's Sheffield based daughter company. Mücher and its distributors are present in over 30 different countries.

Together with its customers Mücher is permanently developing new and innovative products for below and above ground applications. Mücher's products are known for their high quality, for being easy to install and for solving problems on site. A good example of a new product development is the Multi-Flexible-Coupling GENIUS.

New product developments are tested in Mücher's own test laboratory against all requirements resulting from the relevant standard. Any new developed seal will run through both material and functional tests. Before any product launch the new developed seal will be tested on live sites to ensure it fulfills all requirements and ease of installation on site. Therefore it is assured that only products that meet the high Mücher quality standard will exit our factory.

Since 1993 Mücher has run a quality management system and is certified to DIN EN ISO 9001:2015.

THE MÜCHER-COMMITMENT

SUMMARIZES THE KEY COMPETENCE OF THE COMPANY.

GUIDANCE

You can trust us – we are consulting you the right way! Both commercial and technical consulting have got the highest priority for Mücher. It is our ambition to offer solutions to our customers that are both technically reliable and commercially sustainable. The competence of our Sales & Technical team is outstanding and will continue to develop through training courses and further education.

The guideline to improve our support and consulting further is described in our quality management system according to DIN EN ISO 9001:2008 which was launched over 20 years ago.

DELIVERY

Ordered a.m. – supplied next day! Any a.m. incoming standard sized orders can be supplied next day either for stock or directly to site. Our operational processes from consulting to supplying is completed within a short period of time.

INNOVATION

Our innovations help improving problems on site! It is our companies aim to develop new products and to improve and further develop the existing range of products through rivaling new and innovative technologies. A good example is the initial launch of the TOX®-Technology to the sewerage industry. The TOX®-Technology eliminates the corrosion of the stainless steel components and increases the life circle.

AVAILABILITY

100% availability creates confidence! Our entire product range is stocked in bulk. This includes both core range items with a high turn around as well as special items with a lower demand. The manufacturing department is the heart of our company. **This is where we manufacture bespoke made large standard couplings and bushes on special customer demands and on time.**

Our 100% availability and delivery capacity allows us to offer a proper solution for almost any problem within the sewerage industry.

SECURITY

On the safe side with Mücher!

All our products comply with and exceed the requirements of the latest DIN and European standards as well as national and international approvals. If it says MÜCHER you can depend on a safe installation process for the installer.

The European Technical Approval ETA-09/0248 assumes a **life circle for Mücher couplings of 50 years, providing proper packaging, stocking and installation.**

INNOVATION

Couplings and other Mücher joints and rings are constantly developed further, both in product design and material. They are characterised by quality, long-life cycle and user friendliness. **Our innovations are in the detail!**

TOX[®]-TECHNOLOGY

Traditional shear band fabrication entails spot welding of clamps to the shear band. Whereas with TOX[®]-TECHNOLOGY heat created during the welding process actually burns the stainless steel. The composition of the stainless steel is attacked and intercrystalline corrosion can result at the welding points.

The shear bands on Mücher couplings incorporate the latest in stainless steel fastening techniques:

TOX[®]-TECHNOLOGY (Clinching process, no spot welds)

The negative aspects associated with spot welding are eliminated in this advance process, yet the bond meets or exceeds all relevant tensile strength and shear requirements.

Properties	TOX [®] -Point	Spot Weld
Corrosion	none	yes
Structural Change	none	yes
Dynamic Resilience	excellent	not perfect
Static Resilience	good	excellent
Energy Input	minimal	extremely high
Environment friendly manufacturing	excellent	bad (steams)

SALT SPRAY TEST SHOWS DIFFERENT CORROSION RESISTANCES

In a salt spray test according to DIN 50 021 SS (neutral) the different corrosion resistances of spot welded and toxed connection were compared.

Test Certificate No. 22000197 MPA NRW

After only a few days a clear corrosion was visible on the spot welded test blocks. The toxed (clinched) stainless steel bands did not show any corrosion after 504 hours (test ended after 3 weeks).

ADVANCED BOLTING SYSTEM

All of Muecher's large diameter couplings (from MSC 635) and all extra wide couplings are fitted with the all new advanced bolting system. Choosing the right clamp type (hi-torque, medium duty or bolted) and applying the right tightening torque is essential for large diameter couplings.

The bolting system is manufactured from stainless steel grade 1.4401 (AISI 316). It is positioned on the EPDM rubber sleeve and ensures the necessary compression to form a permanently sealed joint.

The purpose of this new development is to make the installation of the coupling to the pipe considerably quicker and much easier. The new bolting system has been engineered so that the sledge runs through the header casing, eliminating any protrusion of the bolt head.

This enables the installer to use a standard 13mm socket wrench which will reduce installation time by more than 50%.

Compared to other bolting systems, the advanced Mission bolting systems offers the following advantages:

- Even better sealing performance by wider clamps
- Easier installation by sledge system running through header
- Twice as quick to install than standard systems
- No special tools required, just use a standard 13 mm socket wrench
- Less risk of injury, therefore more health and safety conscious

„LOCK IN PLACE“ RUBBER PROFILE

Mücher rubber sleeves are fitted with a unique rubber profile. The “lock in place” profile made from EPDM rubber ensures that the clamps and shear band are properly positioned on the sleeve and remain firmly in place during transit, stocking or installation on site.

The necessary compression of the rubber sleeve can only be guaranteed by a proper positioning of the stainless steel components.

Furthermore to the external based “lock in place” profile, the internal based sealing lines achieve a better sealing effect. Through the stepped sealing lines, additional EPDM sealing material can be compressed. This is of special advantage for sewerage pipes with a rough surface such as concrete pipes.

STAINLESS STEELS

Stainless steel refers to a range of iron based alloys which rely on their chromium content for resistance to corrosion. Research in a number of countries worldwide has shown that in normal soils austenitic stainless steel with a 17% chromium and 9% nickel content gives satisfactory performance, with a design life in excess of 100 years.

Whereas in poorly drained gravels, industrial or colliery spoil and in cases where the ground or groundwater contains chlorides (exceeding 1000 ppm) pitting of the steel can occur. In these circumstances the application of a protective wrapping such as "Denso tape" will give adequate protection. Alternatively, in these circumstances an austenitic stainless steel containing molybdenum (minimum 2%) will give better corrosion resistance without the need for additional protection.

Mücher supplies two grades of austenitic stainless steel to suit either normal conditions or conditions when additional corrosion resistance is required.

For use in normal conditions Mücher's standard products use components manufactured from grade 1.4301 (AISI 304) austenitic stainless steel to DIN EN 10088-2.

For those conditions requiring higher corrosion resistance than components manufactured from grade 1.4401 (AISI 316) austenitic stainless steel to DIN EN 10088-2 is available, too. This grade contains 2% molybdenum and is especially suitable for marine environments.

DIN EN 100 88	Trade Name	International Term	COMPOUNDS-%			
			Carbon (C)	Chromium (Cr)	Nickel (Ni)	Molybdenum (Mo)
1.4301	V2A	BS 304 / AISI 304	≤ 0,07	17,5-19,5	8,0-10,5	-
alternatively						
1.4307	V2A	BS 304 / AISI 304	≤ 0,03	17,5-19,5	8,0-10,0	-
1.4567	V2A	BS 304 / AISI 304	≤ 0,04	17,0-19,0	8,5-10,5	-
1.4404	V4A	BS 316 / AISI 316	≤ 0,03	16,5-18,5	10,0-13,0	2,0-2,5
alternatively						
1.4401	V4A	BS 316 / AISI 316	≤ 0,07	16,5-18,5	10,5-13,5	2,0-2,5
1.4571	V4A	BS 316 / AISI 316	≤ 0,08	16,5-18,5	10,5-13,5	2,0-2,5

The welding of stainless steel requires special competence and care as the steel can potentially corrode, resulting in an intercrystalline attack.

Since 2001 Mücher successfully applies the TOX®-Technology which makes corrosion almost impossible.

CAOUTCHOUC ELASTOMERS

Rubber is a very flexible and elastic material with a high restoring force. In the technical application this material is officially named elastomer.

The raw materials are natural or synthetic elastomers. A rubber mixture contains different additives. Through addition of heat, rubber becomes vulcanised. This process enables the elasticity of rubber. Deformation within the elastic range can be repeated limitless times without the change of the initial shape. As soon as the deformation forces are released, the elastomer returns back into its initial shape.

Elastomers are resistant against many acids, leaches and aromatic hydrocarbons which appear in the private, public and industrial sewage. For the sealing technology it is important to estimate this resistance, knowing the conditions of the joint such as the concentration of the medium, temperature, pressure as well as the static and dynamic strains.

The ideal elastomer material which is resistant to all gases and fluids does not exist yet. It is necessary to select the material which is the most suitable to meet the requirements demanded.

The most common elastomer types used in the sewage technology are EPDM, SBR, NBR, NR and FKM which all meet the current standards, such as DIN 4060 and DIN EN 681.

RESISTANCE OF ELASTOMERS

The following listed values are for guidance only. The values and characteristics cannot generally be transferred to all operating conditions.

PROPERTIES	EDPM	SBR	NBR	NR	FKM
Ozone Resistance	1	4	4	4	2
Oil Resistance	4	5	2	6	1
Fuel Resistance	5	6	2	6	1
Acid Resistance	1	3	4	3	1
Leach Resistance	1	3	4	3	1
Gas Permeability	4	4	2	5	2
Electric Resistance	2	2	5	1	2
Rebound Resilience	3	3	3	2	3
Tear Strength	3	2	2	1	2
Temperature Resistance	-40° bis + 120°C	-40° bis + 80°C	-30° bis + 100°C	-40° bis + 80°C	-40° bis + 200°C
Temporary max. Temperature	+ 160°C	+ 130°C	+ 130°C	+ 130°C	+ 230°C

1 = excellent 2 = good 3 = satisfactory 4 = sufficient 5 = poor 6 = fail

SHORT DESCRIPTION OF CAOUTCHOUC TYPES

EPDM (Ethylene - Propylene - Diene - Monomer)

Contains extraordinary resistance to oxygen, ozone and further atmospheric influences. UV-light resistant.

SBR (Styrene Butadiene Rubber)

One of the major synthetic rubbers with similar properties as natural rubber (NR). Compared to NR the abrasion resistance of SBR is superior but with an associated deterioration of the elasticity.

NBR (Acrylonitrile Butadiene Rubber)

The basis for NBR is a mixture of acrylonitrile and butadiene. The higher the acryl percentage, the better the resistance against mineral oils and fuels but with an associated deterioration of the elasticity and the cold flexibility.

NR (Natural Rubber)

The raw material is latex milk, extracted from caoutchouc trees. Unlike several synthetic rubbers, NR particularly possesses excellent elastic qualities.

FKM (Fluorinated Rubber)

FKM is a copolymer of highly fluorinated hydrocarbon and has very good resistance to media, ozone and aging. It is used in particular for applications with high process temperatures and aggressive media.

QUALITY MANAGEMENT SYSTEM, CE-MARKING

Since 1993 Mücher's quality management system according to DIN EN ISO 9001:2015 is the guideline for manufacturing, product development, sales and distribution. Developing the quality management system further is one of Mücher's strategic aims.

The compliance of Mücher products with all EU standards and approvals allows Mücher to CE-mark its products. With the CE-marking, Mücher declares that all products meet the requirements of the following standards both for functional and material requirements:

DIN 4060

Bestehendes Zertifikat: 28. Januar 2022
 Dieses Zertifikat ist gültig bis: 27. Januar 2025
 Zertifikat-Nr.: 10412903

Erstmögliche Zulassung: ISO 9001 - 01. Februar 1993

Zertifikat

Hiermit wird bescheinigt, dass das Managementsystem von:

Mücher Dichtungen GmbH & Co. KG

Europaallee 43, 50226 Frechen, Deutschland

durch LRQA geprüft und bewertet wurde und den folgenden Normen entspricht:

ISO 9001:2015

Gültigkeits-Nr.: ISO 9001 – 0017858

Das Managementsystem ist anwendbar für:

Entwicklung, Produktion und Vertrieb von Dichtungen der drucklosen Entwässerung im Tiefbau und in der Haustechnik.

CONSTRUCTION PRODUCTS REGULATION

The European construction products regulation is in place since 01.07.2013.

As a manufacturer of building and construction products, Mücher Dichtungen® declares the conformity of all products according to the European standards and approvals in its declaration of performance.

EUROPEAN STANDARD

Since January 2015 flexible couplings have been standardized for the first time ever in the DIN EN 16 397. Until 2014 couplings with and without shear band were only standardized in the DIN EN 295-4 when used with clay pipes.

The scope of application has now sizably extended to the following:

- Couplings can be used for all pipe materials for non-pressure drainage and sewage systems
- For above and below ground applications
- For installation inside and outside of buildings
- For repair purposed and connecting of different pipe systems

The new European Standard for flexible couplings is defined into two parts:

Part 1: **Performance requirements**, DIN EN 16397-1

Part 2: **Characteristics and testing** for metal banded flexible couplings, adaptors and bushes, DIN EN 16397-2

As all relevant pipe standards and technical regulations have been included in the new standard, the scope of testing has considerably increased. Mücher secures its high product quality and the compliance with the standards by external testing at MPA (Materialprüfungsamt) in Dortmund, as well as by internal tests in the Mücher test laboratory. **Therefore Mücher is able to proof test results and compliances although the external quality control is no longer obligatory.**

DIN EN 16397

CIVILS

Multi-Flexible-Coupling

GENIUS

- + One coupling for all pipe materials
- + For above and below ground
- + With integrated bushes
- + Resistant to 2.5 bar

Multi-Flexible-Coupling GENIUS - for the connection of all pipe systems with different or same outside diameters

The Multi-Flexible-Coupling GENIUS with integrated bushes connects all plain ended pipes within one dimension and can be used inside and outside of buildings.

The right solution always to hand: What ever pipe material needs to be jointed within one dimension, the GENIUS will always be the right solution for the contractor.

INSTALLATION

Bush at smaller pipe remains integrated – fold out and remove bush at larger pipe.

Slide GENIUS over larger pipe.

Push smaller pipe into GENIUS and tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Multi-Flexible-Coupling GENIUS with integrated bushes connects all plain ended pipe materials within one dimension with different or same outside diameters.

Coupling

CANADA PLUS MC TYP 2A

- + Coupling for clay pipes
- + For above and below ground
- + For plain ended pipes within the same dimension
- + Resistant to 0.6 bar

Coupling Canada Plus Type 2A - for connecting clay pipes within same dimension

The coupling Canada Plus Type 2A connects plain ended clay pipes within same dimension and is compensating differences in outside diameters of max. 6 mm.

The coupling Canada Plus Type 2A can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Coupling Canada Plus Type 2A for connecting clay pipes within same dimension for applications above and below ground as well as inside and outside of buildings.

Standard Coupling

CANADA PLUS MSC TYP 2B

- + For all pipe materials
- + For above and below ground
- + For usage with bushes
- + Resistant to 2.5 bar

Standard Coupling Canada Plus Type 2B – for the connection of all pipe systems with different or same outside diameters

The Standard Coupling Canada Plus Type 2B connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The Standard Coupling Canada Plus Type 2B can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Standard Coupling Canada Plus Type 2B for connection of all plain ended pipe materials with different or same outside diameters for applications above and below ground as well as inside and outside of buildings. Differences in outside diameters of more than 12 mm will require the use of bushes.

Standard Coupling

BUSH

- + For compensating different outside diameters
- + In combination with Standard Coupling
- + Extra tightness through pretension
- + Resistant to 2.5 bar

Bush - in combination with Standard Coupling - for compensating larger outside diameter differences

Bushes are required to be used in combination with Standard Couplings when there is an outside diameter difference of more than 12 mm.

By combining multiple bushes made from different thicknesses (5, 9, 14, 24 mm) almost any connection can be achieved ensuring a tight fit.

Bushes are manufactured with pretension and tighten against each other. This effect is supported through the toothing of the rubber profile.

INSTALLATION

Slide coupling completely over larger plain end.

Slide bush over smaller plain end and position bush properly.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Bushes with pretension for compensating larger outside diameter differences. Outside diameter differences need to be taken on site.

Pressure Tightness:	2.5 bar water / -0.3 bar vacuum
Jetting Resistance:	120 bar
Corrosion Resistance:	TOX®-Technology
Sealing Material:	EPDM or Nitrile (NBR) rubber with lock in place profile according to DIN EN 681-1
Temperature Resistance:	-40°C to +120°C, temporary max. temperature +160°C
Standard/Approval:	DIN EN 16397-2, European Technical Approval ETA-09/0248, CE15

Coupling

BML-CONNECTOR

- + For bridge drainage
- + Reinforced clamps
- + AISI 316 stainless steel
- + Ozone resistant EPDM rubber

BML-Connector – for connecting bridge drainage pipes within same dimension

The BML-Connector is fitted with reinforced clamps. Linear expansion through temperature variation and vibrations of the bridge can be compensated.

An angular deflection of up to 3% allows installations for curved bridges, too. The ozone resistant EPDM rubber guarantees a durable tightening.

The BML-Connector can also be supplied in nitrile (NBR) rubber to offer resistance against oil and petrol. The used materials are resistant against road salt and exhaust fumes.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

BML-Connector for connecting bridge drainage pipes made from cast iron, GRP or stainless steel.

Extra Wide Coupling

CANADA TITAN XL

- + For all pipe materials
- + For above and below ground
- + Extra wide profile
- + Resistant to 2.5 bar

Extra Wide Coupling Canada TITAN XL – for safe connecting of large diameter pipes

The Extra Wide Coupling Canada TITAN XL connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The extra wide profile allows a safe and flexible laying of large diameter pipes from DN 800.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Extra Wide Coupling Canada TITAN XL for connecting all plain ended pipe materials with different or same outside diameters for applications above and below ground. Differences in outside diameters of more than 12 mm will require the use of bushes.

CIVILS

Coupling Kit

EASY-REP MER

- + For repair of damage or cracks
- + No stop of water flow
- + For above and below ground
- + Resistant to 0.5 bar

Coupling Kit EASY-REP – allows local repairs without stopping the water flow

EASY-REP is a rubber flexible repair coupling supplied in an easy to install kit form.

EASY-REP is designed to allow pipe repairs to be carried out to sewerage and drainage pipelines which have been subject to local damage or cracks, without the need to replace the section of pipe or even to stop the flow of water whilst carrying out the repair.

CIVILS

INSTALLATION

Coat rubber glue to the sleeve.

Tighten shear band reciprocally.

Tighten clamps.

DESCRIPTION

TECHNICAL SPECIFICATION

Coupling Kit EASY-REP for local repairs of damaged or cracked waste water pipes made from all materials. The outside diameter on the damaged pipe section needs to be taken on site.

Pipe DN/Material _____

Adaptor Coupling

MAC

- + Adaptor for different outside diameters
- + For above and below ground
- + Reliable and durable solution
- + Resistant to 0.6 bar

Adaptor Coupling MAC - for the connection of all pipe systems with different outside diameters

The Adaptor Coupling MAC joints all plain ended pipes with different outside diameters and materials.

The Adaptor Coupling MAC can be used for applications above and below ground as well as inside and outside of buildings.

When changing nominal diameters, the flow direction needs consideration.

INSTALLATION

Position plain ended pipes.

Slide adaptor coupling over one plain end.

Push other plain ended pipe into adaptor coupling and tighten clamps.

DESCRIPTION

TECHNICAL SPECIFICATION

Adaptor Coupling MAC for the connection of all plain ended pipe systems with different outside diameters for applications above and below ground as well as inside and outside of buildings.

Drain Coupling

MDC

- + Coupling for same outside diameters
- + For above and below ground
- + Reliable and durable solution
- + Resistant to 0.6 bar

Drain Coupling MDC - for the connection of all pipe systems with same outside diameters

The Drain Coupling MDC connects all plain ended pipes with same outside diameters and materials.

The Drain Coupling MDC can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps.

DESCRIPTION

TECHNICAL SPECIFICATION

Drain Coupling MDC for the connection of all plain ended pipe systems with same outside diameters for applications above and below ground as well as inside and outside of buildings.

Push-In Adaptor

MSA

- + For different materials
- + Internal seal
- + Resistant to 0.5 bar

Push-In Adaptor - for the internal connection of pipe systems with different dimensions and materials

The single Pipe Connector joints pipe systems with different dimensions and materials and can be used for flush-mounting and non-buried pipe connections.

The Push-In Adaptor is made from a durable EPDM rubber and has a noise reducing impact on downpipes.

Deutsches Institut für Bautechnik

INSTALLATION

Position pipe ends.

Insert Single Pipe Connector into larger pipe. Apply lubricant to plain ended pipe.

Insert smaller pipe into Single Pipe Connector.

DESCRIPTION

TECHNICAL SPECIFICATION

Push-In Adaptor for the internal connection of pipe systems with different dimensions and materials.

ROLL-RING MRR

- + Connection to sockets without seal
- + Socket connection remains
- + Reliable and durable solution
- + Resistant to 0.5 bar

Roll-Ring – for the connection of spigots from all pipe materials to sockets without seal

The Roll-Ring connects spigots from all materials to sockets without seal (e.g. clay or concrete).

By using the Roll-Ring there is no need for cutting off the socket and connecting with a flexible coupling.

The Roll-Ring is individually produced to the customer's requirements, to provide the right compression for effective sealing.

DIN 4060

INSTALLATION

Do not use lubricant.

Position Roll-Ring in front of socket.

Push spigot into socket.

DESCRIPTION

TECHNICAL SPECIFICATION

Roll-Ring for the connection of spigots from all pipe materials to sockets without seal.

P-RING

- + Replacement of clay pipe spigot seal
- + For use of shortened clay pipes
- + Joint system C
- + Resistant to 0.6 bar

P-Ring - for the replacement of the clay pipe spigot seal for shortened clay pipes

The P-Ring connects shortened clay pipes with clay sockets (joint system C according to DIN EN 295). P-Rings are available for both normal and high strength purposes.

The internal steel ring assures the ideal positioning of the P-Ring when pushing pipes together.

INSTALLATION

Install P-Ring on spigot.

Apply lubricant to socket and P-Ring.

Push pipes together.

DESCRIPTION

TECHNICAL SPECIFICATION

P-Ring with internal steel ring for the connection of shortened clay pipe according to joint system C, DIN EN 295.

Ü-P-RING

- + Connection of thin walled pipes to clay sockets
- + Socket connection remains
- + Joint system C
- + Resistant to 0.6 bar

Ü-P-Ring - for the connection of spigots made from plastic, ductile or cast iron to clay sockets

The Ü-P-Ring connects thin walled pipes with clay sockets (joint system C according to DIN EN 295).

The internal steel ring assures the ideal positioning of the Ü-P-Ring when pushing pipes together.

INSTALLATION

Install Ü-P-Ring on spigot.

Apply lubricant to socket and Ü-P-Ring.

Push pipes together.

DESCRIPTION

TECHNICAL SPECIFICATION

Ü-P-Ring with internal steel ring for the connection of thin walled pipes (plastic, cast iron, GRP) to clay sockets according to joint system C, DIN EN 295.

- + Connection of clay spigot to clay socket
- + Joint system C
- + Resistant to 0.6 bar

M-P-Ring DN 200 - for the connection of clay spigots with normal strength to clay sockets with high strength

The M-P-Ring DN 200 connects clay spigots with normal strength with seal (socket K or S-Ring) to sockets with high strength (socket K or S).

The change from normal to high strength can be done on the clay pipe run or when connecting to concrete manholes (extra strength BKK, extra strength GM-fitting).

INSTALLATION

Insert M-P-Ring into clay socket.

Apply lubricant to socket and M-P-Ring.

Push spigot into socket.

DESCRIPTION

TECHNICAL SPECIFICATION

M-P-Ring DN 200 for changing from normal to high strength on the pipe run or when connecting to concrete manholes from clay spigots with normal strength to sockets with high strength (socket K or S) according to joint system C, DIN EN 295.

Joint for footed concrete pipes

MULTI-STEP

- + Connection of footed and circular pipes
- + For all pipe materials
- + Easy installation on site
- + Resistant to 0.5 bar

MULTI-STEP - internal joint for the connection of footed to circular pipes

MULTI-STEP connects footed concrete pipes with circular pipes from other materials. MULTI-STEP allows the punctual repair of footed concrete pipes within the operating sewer.

The MULTI-STEP joint consists of an EPDM elastomer with an internal steel body.

Circular pipes can be connected with footed concrete pipes as well as circular pipes among each other.

DIN 4060

INSTALLATION

Remove damaged pipe section.

Chamfer pipes and insert MULTI-STEP. Slide

Insert new pipe section and joint with a standard coupling.

DESCRIPTION

TECHNICAL SPECIFICATION

Joint MUTLI-STEP for the connection of footed concrete pipes with circular pipes from other materials (e.g. clay, plastic, etc.).

Wedge-Shaped Seal

MKG

- + Seal for concrete manholes
- + Fixed seal
- + Caoutchouc elastomer according to DIN EN 681-1
- + Resistant to 0.5 bar

Wedge-Shaped Seal MKG - for the connection of manhole rings according to DIN 4034

The Wedge-Shaped Seal MKG is used for sealing concrete manholes. The seal is made from a caoutchouc elastomer with a dense structure. It is positioned on the spigot of the manhole shaft and is compressed between the manhole rings.

DIN 4060

INSTALLATION

Slide MKG seal over spigot.

Apply lubricant to MKG seal.

Push manhole rings together.

DESCRIPTION

TECHNICAL SPECIFICATION

Wedge-Shaped Seal MKG for concrete manholes according to DIN 4034. The connection requires testing according to DIN EN 1610.

BKL Jointing Element – for the connection of clay pipes to concrete manholes and road gullies

The BKL Jointing Element is integrated into concrete manholes or road gullies (socket L, joint system F) when manufactured.

To get the necessary space for installation, the BKL Jointing Element is installed together with a polystyrene supporting element.

INSTALLATION

Remove polystyrene from socket.

Apply lubricant to BKL joint.

Push pipe into socket.

DESCRIPTION

TECHNICAL SPECIFICATION

BKL Jointing Element including polystyrene supporting element according to DIN EN 295-4 for the connection of clay pipes (joint system F) to concrete manholes or road gullies according to DIN 4034 and DIN EN 1917.

Z-JOINT

- + For Road Gullies (wet sludge trap)
- + Excellent damping behaviour
- + Protection of concrete gully
- + Resistant to 0.5 bar

Z-JOINT - for concrete road gullies

The Z-Joint DN 450 is used for concrete road gullies with a wet sludge trap according to DIN 4052.

The Z-Joint is positioned on the gully rings and is compressed between them.

A better damping behavior is achieved, hence resulting in a longer life cycle of the concrete road gully. The traffic loads can be absorbed more constantly.

INSTALLATION

Clean sealing surface.

Insert Z-joint.

Push gully rings together.

DESCRIPTION

Sewer Saddle

TWISTEE®

- + Connecting to thick walled main sewers from DN 300
- + Standard core drill size of 200 mm
- + Various lateral pipe materials to be jointed
- + Resistant to 0.6 bar

Sewer Saddle TWISTEE – for connecting lateral pipes to thick walled main sewers

As the Sewer Saddle TWISTEE DN 150 has been designed with a stub-out, it offers the possibility to connect to any DN 150 lateral pipe material.

The main sewer requires a minimum wall thickness of 30 mm.

Optionally the TWISTEE is supplied with a double socket coupler.

CIVILS

INSTALLATION

Drill hole.

Insert TWISTEE gasket considering flow direction.

Twist TWISTEE stub-out into gasket and slide double socket coupler over.

DESCRIPTION

CONNECTING OPTIONS

TWISTEE® Plastic with coupling

Push the plastic coupling on to the TWISTEE® spigot and then connect the plastic pipe.

TWISTEE® Clay with adaptor

Place adaptor on to the TWISTEE® spigot and tighten the first clamp. Insert the clay pipe and tighten the second clamp.

TWISTEE® Twin Wall Plastic/GRP with coupling

Place coupling on to TWISTEE® spigot and tighten the first clamp. Place rubber ring in the second groove of the Twin Wall Plastic pipe. Then connect the pipe and tighten the second clamp.

Sewer Saddle

T-FLEX

- + For main sewers with smooth surface
- + For all sewer materials
- + Sealing against the outer sewer wall
- + Resistant to 0.5 bar

Sewer Saddle T-Flex - for connecting lateral pipes to existing sewers or drains

The seal of the Sewer Saddle T-Flex is formed by compression of the rubber apron against the outer sewer wall and connects laterals to existing sewers or drains with a smooth surface.

The size range of the Sewer Saddle T-Flex is designed to fit plain ended plastic pipes.

The tolerances of the Sewer Saddle T-Flex allow the use of standard core drills.

DIN 4060

INSTALLATION

Drill and clean hole 90° to pipe axis.

Position T-Flex centrally over cored hole and tighten clamps around the main sewer.

Push lateral pipe into saddle and tighten clamp.

DESCRIPTION

Lateral Connector

LTC

- + Connecting PP/PVC to Twin Wall or Ultra-Rib
- + Universal connector for many sewers
- + Reliable and durable solution
- + Resistant to 0.5 bar

Lateral Connector LTC – for connecting lateral plastic pipes to existing structured walled main sewers

The Lateral Connector LTC connects smooth walled plastic pipes to existing structured walled sewers like Twin Wall or Ultra-Rib and offers an economical and easy to install solution on site.

The Lateral Connector LTC can be generally used for various structured walled sewers, depending on the wall thickness (see application advices).

DIN 4060

INSTALLATION >>

Drill and clean hole 90° to pipe axis.

Insert LTC into main sewer.

Push lateral pipe into LTC and tighten clamp.

Application advices:

- Lateral Connectors LTC DN 100, DN 125 and DN 150 can be used if the wall thickness of the main sewer is not larger than 55 mm.
- Lateral Connector LTC DN 200 and DN 250 can be used if the wall thickness of the main sewer is not larger than 90 mm.

CORE DRILL

for core drills for twin-walled plastic pipes

CORE DRILL				
Article Number	Reference	Core Drill (mm)	L Length (mm)	Weight (kg)
32601110	Core Drill 127 mm	127	110	1,5
32601125	Core Drill 142 mm	142	110	1,6
32601160	Core Drill 177 mm	177	110	2,1
32601200	Core Drill 217 mm	217	110	2,8

Recommended in combination with the T-Flex as well.

Lateral Connector

RRD M40

- + Connecting thin walled laterals to concrete sewers
- + Reliable and durable solution
- + EPDM rubber profile
- + Resistant to 0.5 bar

Lateral Connector M40 – for connecting thin walled lateral pipes to concrete main sewers (minimum wall thickness 45 mm)

The Lateral Connector M40 connects thin walled pipes (e.g. plastic, cast iron, etc.) to concrete main sewers with a minimum wall thickness of 45 mm.

DIN 4060

INSTALLATION

Drill and clean hole 90° to pipe axis.

Insert M40 into main sewer.

Apply lubricant to lateral plain end and push lateral into M40.

DESCRIPTION

TECHNICAL SPECIFICATION

Lateral Connector M40 for connecting thin walled lateral pipes to existing concrete main sewers with a minimum wall thickness of 45 mm.

B-RING

- + Connecting clay laterals to clay sewers
- + From clay sewer DN 300
- + Preformed EPDM rubber profile
- + Resistant to 0.5 bar

B-Ring - for connecting clay laterals to clay main sewers

The B-Ring according to DIN EN 295-4 connects plain ended clay pipes and fittings to clay main sewers.

Both B-Ring and clay fitting form an economical solution when connecting to existing sewers.

INSTALLATION

Drill and clean hole 90° to pipe axis.

Insert B-Ring according to the peak marking.

Push clay lateral into B-Ring.

DESCRIPTION

TECHNICAL SPECIFICATION

B-Ring for connecting clay laterals to clay main sewers.

NON-RATTLE-RING

- + Avoids rattling of manhole covers
- + Protects the entire manhole
- + Rigid shape (hardness 90 IRHD)
- + Long-Life through EPDM mold

Non-Rattle-Ring - avoids rattling of damaged manhole covers

The Non-Rattle-Ring avoids rattling of old damaged manhole covers.

Through the EPDM rubber hardness of 90 IRHD a long-term protection against rattling is achieved.

The rigidity of the Non-Rattle-Ring allows an easy installation.

INSTALLATION

Clean cover frame.

Insert Non-Rattle-Ring.

Pull cover back in.

ANTIFREEZE RING FOR HYDRANTS

- + Prevents the freezing of surface boxes
- + Flexible and adoptable
- + Protects against ingressing water and dirt
- + Long-Life through EPDM mold

Antifreeze Ring for Hydrants - prevents the freezing of surface boxes

The Antifreeze Ring for Hydrants is made from non-ageing EPDM rubber which makes any greasing unnecessary during winter times and offers a perfect protection against the freezing of the surface box.

Furthermore the hydrants are protected against ingressing water and dirt.

INSTALLATION

Clean cover frame.

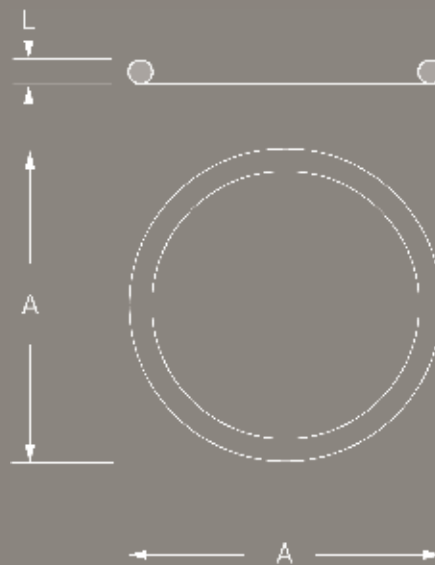

Insert Antifreeze Ring.

Close cover.

FKM-Coupling

RESISTOR

- + Fluoro-Elastomer FKM
- + Industrial applications
- + Chemical and thermal resistant
- + Resistant to 0.6 bar

FKM-Coupling RESISTOR - chemical and thermal resistant for industrial applications

The FKM-Coupling RESISTOR joints plain ended industrial pipe systems with same diameters. It is suitable for above ground and non-pressure applications.

THE FKM-gasket allows a high chemical resistance and a thermal stability of up to +180°C.

The stainless steel shear band covers the entire coupling, therefore protecting the elastomer sleeve.

INSTALLATION

Position plain ended pipes.

Slide sleeve over one plain end and push shear band over.

Tighten clamps reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

FKM-Coupling RESISTOR used in above ground chemical resistant plain ended industrial pipe systems with same diameters. THE FKM-gasket allows a high chemical resistance and a thermal stability of up to +180°C.

Drain Coupling

MDC

- + Coupling for same outside diameters
- + For above and below ground
- + Reliable and durable solution
- + Resistant to 0.6 bar

Drain Coupling MDC - for the connection of all pipe systems with same outside diameters

The Drain Coupling MDC connects all plain ended pipes with same outside diameters and materials.

The Drain Coupling MDC can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps.

DESCRIPTION

TECHNICAL SPECIFICATION

Drain Coupling MDC for the connection of all plain ended pipe systems with same outside diameters for applications above and below ground as well as inside and outside of buildings.

Single Pipe Connector MGA

Drain Coupling MDC

Multi-Flexible-Coupling GENIUS

Internal Drain Connector MRS

Adaptor Coupling MAC

Push-in Adaptor MSA

Multi Pipe Connector MKA

Drain Connector MAS

Coupling Canada Plus MSC

Internal Drain Connector

MRS

- + For different nominal sizes
- + Internal seal
- + Resistant to 0.5 bar
- + Easy & Quick installation

Internal Drain Connector - for the internal connection of pipes with different dimensions.

The internal drain connector is suitable for flush mounting as well as for exposed pipe connections. The MRS is made of a high-quality EPDM sealing material, which is characterized by durability and has a noise-reducing effect in downpipes.

INSTALLATION

Position pipe ends.

Fold in or cut off internal drain connector at the desired position, depending on the connection situation.

Insert internal drain connector into larger pipe, apply lubricant and push in smaller pipe.

DESCRIPTION

Multi Pipe Connectors are very flexible and can be combined and installed in various combinations.

Depending on the application parts of the Multi Pipe Connectors are folded in, removed or pushed inside each other.

Pages 106 - 114 show the application schedules of the Multi Pipe Connectors and in which combinations they can be installed for various different inside and outside pipe diameters.

The right solution always to hand!

MULTI PIPE CONNECTOR KIT MHR

Article-No. 500113

The Multi Pipe Connector Kit consists of 6 Multi Pipe Connectors which offer solutions when connecting pipe systems within 32 - 130 mm diameter.

The Multi Pipe Connector Kit is the ideal basic equipment for every workshop van. The right solution always to hand! The connection can be made immediately and the site work can continue without delay.

KIT RANGE >>

The Multi Pipe Connector Kit consists of the following 6 Multi Pipe Connectors:

Adaptor Coupling

MAC

- + Adaptor for different outside diameters
- + For above and below ground
- + External compression seal
- + Resistant to 0.6 bar

Adaptor Coupling MAC - for the external connection of all pipe systems with different outside diameters

The Adaptor Coupling MAC connects all plain ended pipes with different outside diameters and materials.

The Adaptor Coupling MAC can be used for applications above and below ground as well as inside and outside of buildings.

When changing nominal diameters, the flow direction needs consideration.

INSTALLATION

Position plain ended pipes.

Slide adaptor coupling over one plain end.

Push other plain ended pipe into adaptor coupling and tighten clamps.

DESCRIPTION

TECHNICAL SPECIFICATION

Adaptor Coupling MAC for the external connection of all plain ended pipe systems with different outside diameters for applications above and below ground as well as inside and outside of buildings.

Drain Coupling

MDC

- + Coupling for same outside diameters
- + For above and below ground
- + External compression seal
- + Resistant to 0.6 bar

Drain Coupling MDC - for the external connection of all pipe systems with same outside diameters

The Drain Coupling MDC connects all plain ended pipes with same outside diameters and materials.

The Drain Coupling MDC can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps.

DESCRIPTION

Coupling

CANADA PLUS MSC

- + For all pipe materials
- + For above and below ground
- + For usage with bushes
- + Resistant to 2.5 bar

Coupling Canada Plus MSC – for the external connection of all pipe systems with different or same outside diameters
 The Coupling Canada Plus MSC connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The Coupling Canada Plus MSC can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Coupling Canada Plus MSC for the external connection of all plain ended pipe materials with different or same outside diameters for applications above and below ground as well as inside and outside of buildings. Differences in outside diameters of more than 12 mm will require the use of bushes.

Multi-Flexible-Coupling

GENIUS

- + One coupling for all pipe materials
- + For above and below ground
- + With integrated bushes
- + Resistant to 2.5 bar

Multi-Flexible-Coupling GENIUS – for the connection of all pipe systems with different or same outside diameters

The Multi-Flexible-Coupling GENIUS with integrated bushes joints all plain ended pipes within one dimension and can be used inside and outside of buildings.

The right solution always to hand: What ever pipe material needs to be jointed within one dimension, the GENIUS will always be the right solution for the contractor.

INSTALLATION

Bush at smaller pipe remains integrated – fold out and remove bush at larger pipe.

Slide GENIUS over larger pipe.

Push smaller pipe into GENIUS and tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Multi-Flexible-Coupling GENIUS with integrated bushes for the connection of plain ended pipe materials within one dimension with different or same outside diameters.

FLEXIBLE TEE MFA

- + 90° Tee Junction to existing drains
- + For horizontal and vertical installations
- + Reliable and durable solution
- + Resistant to 0.5 bar

Flexible Tee - for the connection to existing drains

The Flexible Tee connects new to existing drains and is suitable for flush-mounting and non-buried pipe connections.

The Flexible Tee is made from a durable EPDM rubber and has a noise reducing impact on downpipes.

INSTALLATION

Cut off and remove pipe section. Loosen pipe support.

Position Flexible Tee in between plain ended pipes.

Insert plain ended pipes, tighten clamps and fix pipe support.

DESCRIPTION

TECHNICAL SPECIFICATION

Flexible Tee for the 90° Connection to existing drains.

ROLL-RING MRR

- + Connection to sockets without seal
- + Socket connection remains
- + Reliable and durable solution
- + Resistant to 0.5 bar

Roll-Ring – for the connection of spigots from all pipe materials to sockets without seal

The Roll-Ring connects spigots from all materials to sockets without seal (e.g. clay or concrete).

By using the Roll-Ring there is no need for cutting off the socket and connecting with a flexible coupling.

The Roll-Ring is individually produced to the customer's requirements, to provide the right compression for effective sealing.

DIN 4060

INSTALLATION

Do not use lubricant.

Position Roll-Ring in front of socket.

Push spigot into socket.

DESCRIPTION

TECHNICAL SPECIFICATION

Roll-Ring for the connection of spigots from all pipe materials to sockets without seal.

LUBRICANT MGM

- + Jointing forces are minimised
- + Compatibility with other sealing materials
- + For plastic pipes
- + Various package sizes

Lubricant - minimizing the jointing forces for plastic pipe laying
Lubricant is used to minimize the jointing forces when laying plastic pipes.

Lubricant is compatible with other sealing materials.

INSTALLATION

Clean socket and spigot.

Apply lubricant to socket and spigot.

Push pipes together.

TECHNICAL SPECIFICATION

Lubricant for minimizing the jointing forces for plastic pipe laying.

THE MÜCHER-COMMITMENT

GUIDANCE

You can trust us – we guide you the right way!
Both commercial and technical consultation have got the highest priority for Mücher.

DELIVERY

Ordered a.m. – supplied next day!

INNOVATION

It is our companies aim to develop new products and to improve and further develop the existing range of products through rivaling new and innovative technologies.

AVAILABILITY

100% availability creates confidence!
Our entire product range is stocked in bulk.

SECURITY

On the safe side with Mücher!
All our products comply with and exceed the requirements of the latest DIN and European standards as well as national and international approvals. If it says MÜCHER you can depend on a safe installation process for the installer.
